

# Réponse des tiges résiduelles à la coupe partielle de peuplements de peuplier faux-tremble (*Populus tremuloïdes* Michx) en forêt boréale mixte

Arun Bose, Suzanne Brais et Brian D. Harvey

# Why partial cutting?

- **Partial cutting has been suggested as a silvicultural tool to implement “ecosystem based forest management”**
- **Partial cutting or any type of retention harvesting could mimic biological legacies of natural disturbances**

15 years after natural fire

1 year after variable retention

# Is partial cutting a viable practice?

## **Production perspective**

- ✓ Growth of residual trees (Thorpe et al. 2007)
- ✓ Mortality of residual trees (Coates 1997)
- ✓ Recruitment of desired species (Messier et al. 1999)

# Is partial cutting a viable practice?

## Production perspective

- ✓ Growth or residual trees (Thorpe et al. 2007)
- ✓ Mortality of residual trees (Coates 1997)
- ✓ Recruitment of desired species (Messier et al. 1999)

## Ecosystem perspective

- ✓ Maintaining or creating multiple ecosystem services (Franklin et al. 1997)

# Is partial cutting a viable practice?

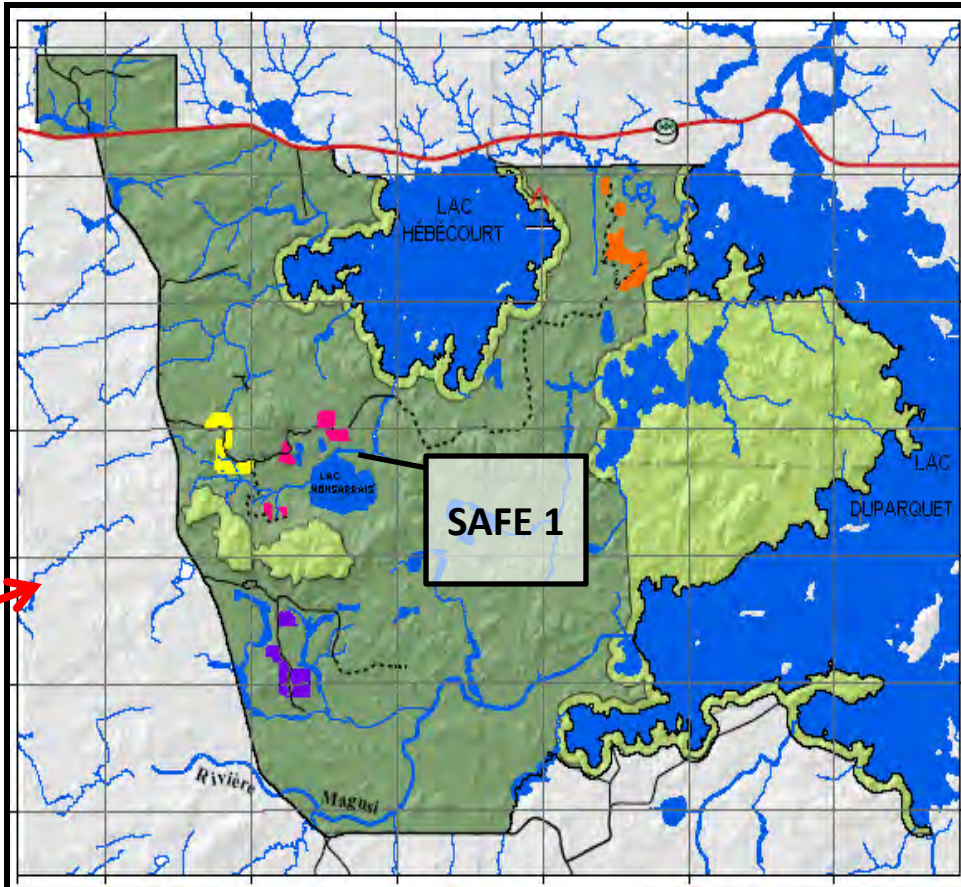

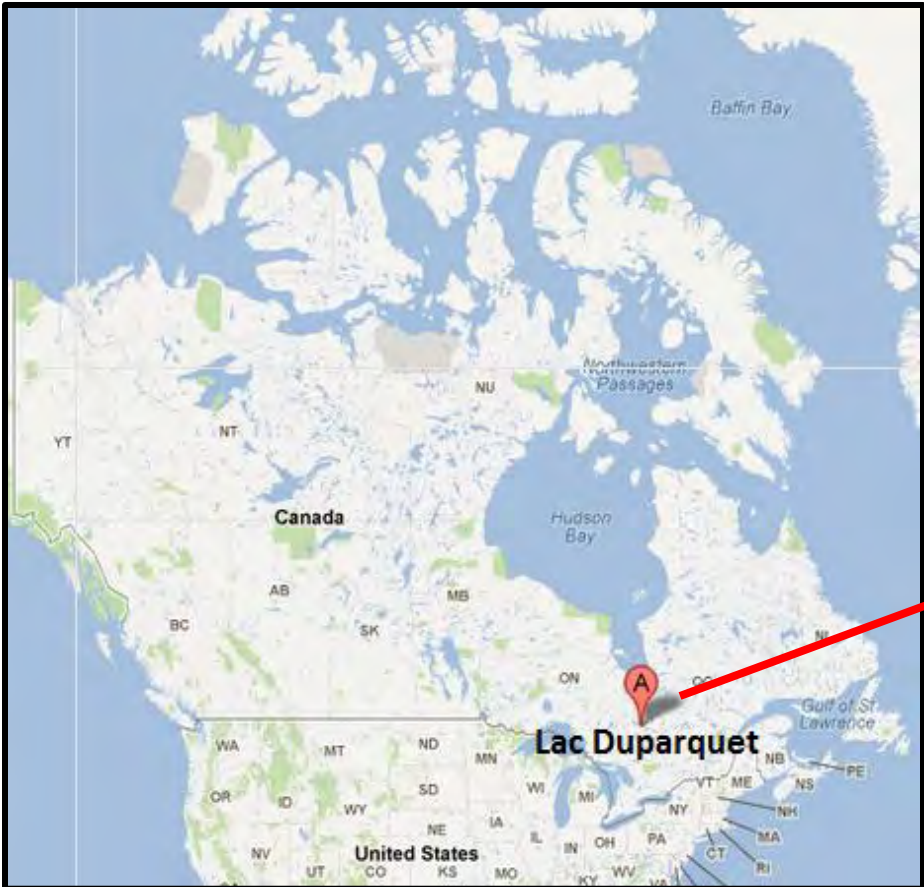

## Production perspective

- ✓ Growth or residual trees (Thorpe et al. 2007)
- ✓ Mortality of residual trees (Coates 1997)
- ✓ Recruitment of desired species (Messier et al. 1999)

## Ecosystem perspective

- ✓ Maintaining or creating multiple ecosystem services (Franklin et al. 1997)

# Study site: SAFE (sylviculture et aménagement forestiers écosystémique)

# Study site: SAFE-1

Stands originated after 1923 fire

# Partial cutting treatments

Low-light thinning; 1/3 basal area removal

High-heavy thinning; 2/3 basal area removal

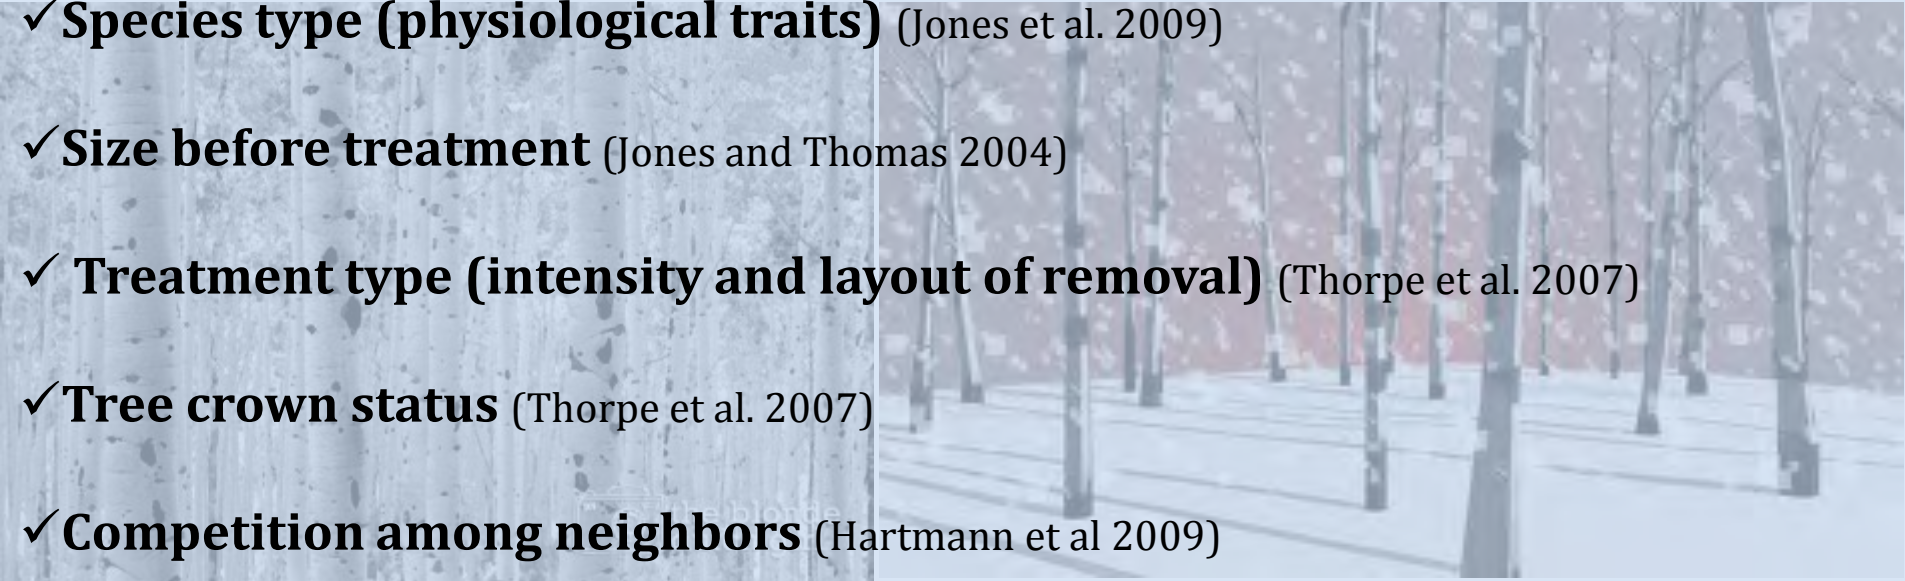

# Partial cutting treatments

# Potential factors affect growth responses

- ✓ **Tree age** (Thorpe et al. 2007)
- ✓ **Species type (physiological traits)** (Jones et al. 2009)
- ✓ **Size before treatment** (Jones and Thomas 2004)
- ✓ **Treatment type (intensity and layout of removal)** (Thorpe et al. 2007)
- ✓ **Tree crown status** (Thorpe et al. 2007)
- ✓ **Competition among neighbors** (Hartmann et al 2009)
- ✓ **Time effect** (Thorpe et al. 2007; Jones et al. 2009)

# Data collection

- 1 Site, SAFE-1
- Sample trees: 54
- 27 each from dominant and codominant crown status
- Three treatments; high-heavy thinning, low-light thinning, and control
- Neighborhood mapping for each sample tree 12 years after treatment application

# Hypothesis

- ✓ **Tree age** (Thorpe et al. 2007) **Not Applicable**
- ✓ **Species type (physiological traits)** (Jones et al. 2009) **Not Applicable**
- ✓ **Size before treatment** (Jones and Thomas 2004):  
**H1-Positive effect**
- ✓ **Treatment type (intensity and layout of removal)** (Thorpe et al. 2007)  
**H2-Positive effect**
- ✓ **Tree crown status** (Thorpe et al. 2007)  
**H3: Dominant > Co-dominant**
- ✓ **Competition among neighbors** (Hartmann et al 2009)  
**H4-Negative effect**
- ✓ **Time effect** (Thorpe et al. 2007; Jones et al. 2009)  
**H5-Linear effect**
  - Initial (2-5 years) growth lag** (Thorpe et al. 2007; Jones et al. 2009)  
**Yes**

# Data Processing and Labs

# Data Processing and Labs

- Tree ring Width measurement by WinDendro (Regent Instrument)
- Measurement varification by COFECHA
- Volume measurement by WinStem (Regent Instrument)

# Data Analysis

## ■ Neighborhood Competition Indices (NCI)

$$NCI = \frac{\sum_{j=1}^N (DBH_j)^\alpha / (dist_{ij})^\beta}{1000}$$

- Neighbor size index,  $\alpha = 0, 1, \text{ and } 2$
- Neighbor distance index,  $\beta = 0, 0.5, 1, \text{ and } 2$
- Neighborhood radius limit,  $R = 6, 8, \text{ and } 10 \text{ m}$

# Results:

## The best NCI model

R (m)	$\alpha$	$\beta$	K	AICc	$\Delta$ AICc	AICc weight (w <sub>i</sub> )	LogLik
6	1	0	5	139.42	0.00	0.30	-64.08
8	1	0	5	140.63	1.21	0.17	-64.69

# Results: Analysis-2, The effect of Time, treatment and crown status

## Dominant

## Co-dominant

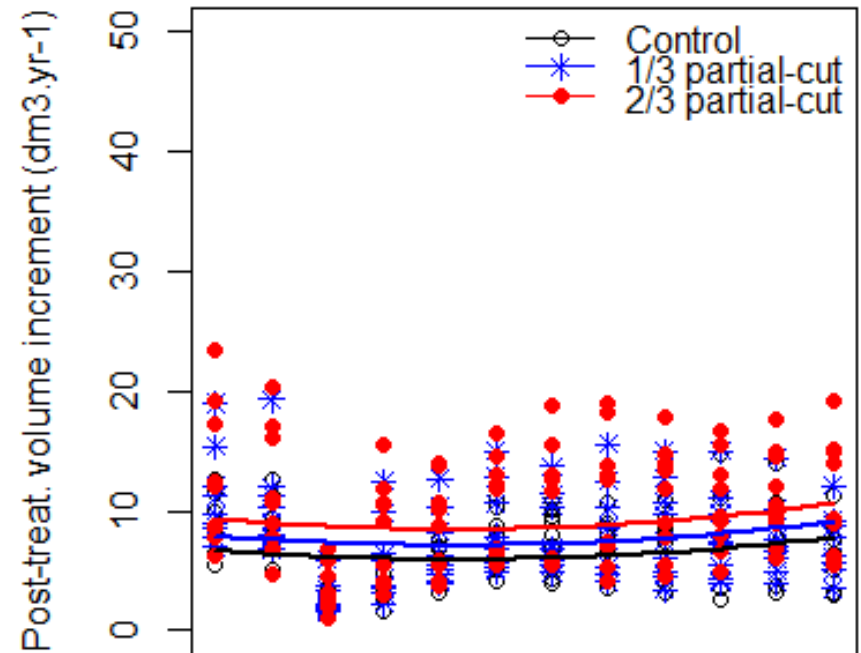

# Results: Analysis-2, The effect of Time, treatment and crown status

## Dominant

## Co-dominant

**Annual increase in volume in the 2/3 partial cut was 25.6 % higher than controls over 12 years**

# Conclusions

✓ **Size before treatment** (Jones and Thomas 2004):

**H1-Positive effect** ✓

✓ **Treatment type (intensity and layout of removal)** (Thorpe et al. 2007)

**H2-Positive effect** ✓

✓ **Tree crown status** (Thorpe et al. 2007)

**H3: Dominant > Co-dominant** ✓

✓ **Competition among neighbors** (Hartmann et al 2009)

**H4-Negative effect** X

✓ **Time effect** (Thorpe et al. 2007; Jones et al. 2009)

**H5-Linear effect** ✓

☐ **Initial (2-5 years) growth lag** (Thorpe et al. 2007; Jones et al. 2009)

**Yes** X

**Merci beaucoup!**
